

Changes from before the peer review to after.

1. Made the diagrams in the computer instead
2. Changed a couple of class attribute names for clarity:
Member:number —> Member:memberNumber
Berth:number —> Berth:berthNumber
3. Removed attribute Berth : currentBoat:Boat
(since I thought it was unnecessary when the Berth and Boat has association.)
4. Added association name between Authenticate Service and Role.
5. Added a part in the readme file about the importance to keep history.
